## This exam is formed of three exercises in two pages.

The use of non-programmable calculator is recommended.

## Exercise 1 (7 points)

## Diver's jump

A diver, considered as a particle of mass $m=80 \mathrm{~kg}$, jumps into the water of a swimming pool from the board at point $A$ situated at a height $h_{A}=6 \mathrm{~m}$ above the surface of the water. The diver leaves the board with a speed $\mathrm{V}_{\mathrm{A}}=5 \mathrm{~m} / \mathrm{s}$, passes through point $\mathrm{A}^{\prime}$ of height $\mathrm{h}_{\mathrm{A}^{\prime}}=\mathrm{h}_{\mathrm{A}}$ and reaches the surface of water at point D (Doc. 1).
Take:

- the surface of water as a reference level for gravitational potential energy;
- $\mathrm{g}=10 \mathrm{~m} / \mathrm{s}^{2}$.

1) Calculate at point $A$ :

1-1) the kinetic energy $\mathrm{KE}_{\mathrm{A}}$ of the diver;
1-2) the gravitational potential energy GPE $_{A}$ of the system (diver, Earth);
1-3) the mechanical energy $\mathrm{ME}_{\mathrm{A}}$ of the system (diver, Earth).
2) The diver attains point $B$, situated at a height $h_{B}=7 \mathrm{~m}$, with a kinetic energy $K E_{B}=200 \mathrm{~J}$.

2-1) Determine the mechanical energy $\mathrm{ME}_{\mathrm{B}}$ of the system (diver, Earth) at point B .
2-2) Deduce that air resistance is negligible.
3) Choose with justification the correct answer.

3-1) During the motion between $B$ and $D$, the kinetic energy of the diver:
a) increases
b) decreases
c) remains the same

3-2) The gravitational potential energy of the system (diver, Earth) at $A\left(\mathrm{GPE}_{\mathrm{A}}\right)$ and that at $\mathrm{A}^{\prime}$ $\left(\mathrm{GPE}_{\mathrm{A}^{\prime}}\right)$ are such that:
a) $\mathrm{GPE}_{\mathrm{A}}<\mathrm{GPE}_{\mathrm{A}^{\prime}}$
b) GPE $_{\mathrm{A}}=\mathrm{GPE}_{\mathrm{A}^{\prime}}$
c) $\mathrm{GPE}_{\mathrm{A}}>$ GPE $_{\mathrm{A}^{\prime}}$

3-3) The speed of the diver at point $A\left(V_{A}\right)$ and that at point $A^{\prime}\left(V_{A^{\prime}}\right)$ are such that:
a) $V_{A}<V_{A^{\prime}}$
b) $\mathrm{V}_{\mathrm{A}}=\mathrm{V}_{\mathrm{A}^{\prime}}$
c) $\mathrm{V}_{\mathrm{A}}>\mathrm{V}_{\mathrm{A}^{\prime}}$

3-4) The work (W) done by the weight of the diver between $A^{\prime}$ and $D$ is:
a) $\mathrm{W}=1000 \mathrm{~J}$
b) $\mathrm{W}=4800 \mathrm{~J}$
c) $\mathrm{W}=5600 \mathrm{~J}$

## Exercise 2 (7 points)

## Efficiency of a nuclear power plant

A nuclear power plant uses uranium ${ }_{92}^{235} \mathrm{U}$ to produce electric energy.
The aim of this exercise is to determine the efficiency of this nuclear power plant.
One of the possible nuclear reactions of the uranium ${ }_{92}^{235} \mathrm{U}$ is given by the following equation:

$$
{ }_{0}^{1} \mathrm{n}+{ }_{92}^{235} \mathrm{U} \rightarrow{ }_{38}^{94} \mathrm{Sr}+{ }_{\mathrm{Z}}^{139} \mathrm{Xe}+\mathrm{x}{ }_{0}^{1} \mathrm{n}
$$

Take: $m\left({ }_{0}^{1} n\right)=1.0087 \mathrm{u} ; \mathrm{c}=3 \times 10^{8} \mathrm{~m} / \mathrm{s} ; 1 \mathrm{u}=1.66 \times 10^{-27} \mathrm{~kg}$.

| Nucleus | ${ }_{92}^{235} \mathrm{U}$ | ${ }_{38}^{94} \mathrm{Sr}$ | ${ }_{\mathrm{Z}}^{139} \mathrm{Xe}$ |
| :---: | :---: | :---: | :---: |
| Mass in u | 234.9942 | 93.8945 | 138.8892 |

1) The above nuclear reaction is fission. Justify.
2) Indicate the approximate value of the kinetic energy of a neutron that produces a nuclear fission.
3) Determine $z$ and $x$, indicating the laws used.
4) Calculate, in $u$ and then in kg , the loss of mass $\Delta \mathrm{m}$ that occurs in this reaction.
5) Calculate, in J, the energy liberated by the fission of one nucleus of uranium ${ }_{92}^{235} \mathrm{U}$.
6) The nuclear power plant consumes 1 kg of uranium ${ }_{92}^{235} \mathrm{U}$ in one day.

Assume that all the nuclei of uranium ${ }_{92}^{235} \mathrm{U}$ undergo fission according to the above equation.
6-1) Show that the energy liberated by the fission of 1 kg of uranium ${ }_{92}^{235} \mathrm{U}$ is $\mathrm{E}=7.3955 \times 10^{13} \mathrm{~J}$.
6-2) Deduce the energy $E_{1}$ liberated by the fission of the uranium ${ }_{92}^{235} U$ in one second.
6-3) The efficiency of this power plant is given by:

$$
r=\frac{E_{\text {electric }}}{E_{1}} \text { where } E_{\text {electric }} \text { is the electric energy produced in one second. }
$$

Calculate the efficiency of this power plant knowing that $\mathrm{E}_{\text {electric }}=2.575 \times 10^{8} \mathrm{~J}$.

## Exercise 3 (6 points)

## The history of astronomy

Read carefully the text of document 2 and then answer the questions that follow.
The ancients believed that the Earth is flat and it is at the center of the universe. The Sun, stars and the other planets rotate around the Earth.
In the $16^{\text {th }}$ century, the Polish astronomer Nicolas Copernicus claimed that the Earth and the other planets revolve around the Sun and rotate around their axis.
In 1609, when Galileo Galilei made the first astronomical telescope, he was the first who discovered four satellites of Jupiter (Galilean satellites).
Until 1609, astronomers thought that the orbits of the planets were circles.
Johannes Kepler published three laws bearing his name: the first two in 1609 and the third in 1619.

Few years later, in 1687, Isaac Newton established the law of universal gravitation.
According to the site "solar system"

## Doc. 2

1) The text of document 2 refers to two theories of astronomy.

1-1) Name these two theories.
1-2) Pick up, from document 2 , a sentence that related to each theory.
1-3) Indicate one similarity between these two theories.
2) Pick up from document 2 the major contribution in astronomy of:
2-1) Galileo Galilei;
2-2) Isaac Newton.
3) Document 3 shows expressions corresponding to Copernicus' theory and/or to Kepler's laws. Using document 3 copy and

| Expression 1 | the planets revolve around the Sun |
| :--- | :--- |
| Expression 2 | the motion of a planet around the Sun is uniform |
| Expression 3 | The period of revolution of a planet increases <br> with its distance from the Sun |
| Expression 4 | the trajectory of a planet around the Sun is <br> elliptic |
| Expression 5 | the speed of a planet varies with its distance <br> from the Sun |
| Expression 6 | the trajectory of a planet around the Sun is <br> circular |
| Doc. 3 |  | complete the table below:

Exercise 1: (7 points) Diver's jump

| Part |  | Answer | Mark |
| :---: | :---: | :---: | :---: |
| 1 | 1.1 | $\mathrm{KE}_{\mathrm{A}}=1 / 2 \mathrm{mV}_{\mathrm{A}}^{2}=1 / 2(80)(5)^{2}=1000 \mathrm{~J}$ | 1 |
|  | 1.2 | $\mathrm{GPE}_{\mathrm{A}}=\mathrm{mgh}_{\mathrm{A}}=80 \times 10 \times 6=4800 \mathrm{~J}$ | 1 |
|  | 1.3 | $\mathrm{ME}_{\mathrm{A}}=\mathrm{KE}_{\mathrm{A}}+\mathrm{GPE}_{\mathrm{A}}=1000+4800=5800 \mathrm{~J}$ | 0.75 |
| 2 | 2.1 | $\mathrm{ME}_{\mathrm{B}}=\mathrm{KE}_{\mathrm{B}}+\mathrm{GPE}_{\mathrm{B}}=200+\mathrm{mgh}_{\mathrm{B}}=200+80 \times 10 \times 7=5800 \mathrm{~J}$ | 0.75 |
|  | 2.2 | $\mathrm{ME}_{\mathrm{A}}=\mathrm{ME}_{\mathrm{B}}=5800 \mathrm{~J}$ <br> The mechanical energy is conserved between $A$ and $B$, thus the air resistance is negligible. | 0.5 |
| 3 | 3.1 | a) During the motion between B and D , the kinetic energy of the diver increases since its speed increases since: <br> $\mathrm{ME}_{\mathrm{B}}=\mathrm{ME}_{\mathrm{D}} ; \mathrm{KE}_{\mathrm{B}}+\mathrm{GPE}_{\mathrm{B}}=\mathrm{KE}_{\mathrm{D}}+\mathrm{GPE}_{\mathrm{D}} ; \mathrm{KE}_{\mathrm{B}}+\mathrm{GPE}_{\mathrm{B}}=\mathrm{KE}_{\mathrm{D}}+0$ and $\mathrm{GPE}_{\mathrm{B}}>0$ then $K E_{D}>K E_{B}$ <br> OR : between B and D , GPE decreases and since $\mathrm{ME}_{\mathrm{B}}=\mathrm{ME}_{\mathrm{D}}$ then KE increases <br> OR : KE increases since between B and D the speed of the diver increases. | 0.75 |
|  | 3.2 | b) The gravitational potential energy of the system (diver, Earth) at A and that at $A^{\prime}$ are equal since $h_{A}=h_{A^{\prime}}$. | 0.75 |
|  | 3.3 | b) The speed of the diver at point A and that at point $\mathrm{A}^{\prime}$ are equal. <br> Since $\mathrm{ME}_{\mathrm{A}}=\mathrm{ME}_{A^{\prime}} ; \mathrm{KE}_{\mathrm{A}}+\mathrm{GPE}_{\mathrm{A}}=\mathrm{KE}_{A^{\prime}}+\mathrm{GPE}_{A^{\prime}}$ but $\mathrm{GPE}_{\mathrm{A}}=\mathrm{GPE}_{A^{\prime}}$ then $K E_{A}=K E_{A^{\prime}}$ then $V_{A}=V_{A^{\prime}}$. | 0.75 |
|  | 3.4 | b) The work done by the weight of the diver between points $\mathrm{A}^{\prime}$ and D is $\mathrm{W}=\mathrm{mgh}_{\mathrm{A}^{\prime}}=80 \times 10 \times 6=4800 \mathrm{~J}$. | 0.75 |

Exercise 2: (7 points) Efficiency of a nuclear power plant

| Part | Answer | Mark |
| :---: | :---: | :---: |
| 1 | This reaction is fission. The heavy nucleus of uranium is divided into lighter nuclei (Sr et Xe ) under the impact of a neutron ( ${ }_{0}^{1} \mathrm{n}$ ) | 1 |
| 2 | The kinetic energy of the neutron is around 0.02 eV . | 0.5 |
| 3 | ${ }_{0}^{1} \mathrm{n}+{ }_{92}^{235} \mathrm{U} \rightarrow{ }_{38}^{94} \mathrm{Sr}+{ }_{\mathrm{z}}^{139} \mathrm{Xe}+\mathrm{x}_{0}^{1} \mathrm{n}$ <br> Conservation of mass number A: $1+235=94+139+x$ then $x=3$ Conservation of charge number $\mathrm{Z}: 92=38+\mathrm{z}$ then $\mathrm{z}=54$ | 1 |
| 4 | $\begin{aligned} & \text { The mass lost } \Delta \mathrm{m}=\mathrm{m}_{\text {before }}-\mathrm{m}_{\text {after }} \\ & \Delta \mathrm{m}=(234.9942+1.0087)-(93.8945+138.8892+3 \times 1.0087)=0.1931 \mathrm{u} \\ & \Delta \mathrm{~m} \text { in } \mathrm{kg}=0.1931 \times 1.66 \times 10^{-27}=3.20546 \times 10^{-28} \mathrm{~kg} \end{aligned}$ | 1.5 |
| 5 | $\mathrm{E}_{\mathrm{lib}}=\Delta \mathrm{m} \times \mathrm{c}^{2}=3.20546 \times 10^{-28} \times\left(3 \times 10^{8}\right)^{2}=2.884914 \times 10^{-11} \mathrm{~J}$ | 1 |
| $6{ }^{6} 6.1$ | $\begin{aligned} & 234.9942 \times 1.66 \times 10^{-27} \mathrm{~kg} \rightarrow 2.884914 \times 10^{-11} \mathrm{~J} \\ & 1 \mathrm{~kg} \rightarrow \mathrm{E} \\ & \text { Then }: E=\frac{2.884914 \times 10^{-11}}{3.9009 \times 10^{-25}}=7.3955 \times 10^{13} \mathrm{~J} \end{aligned}$ | 0.75 |
| 6.2 | The liberated energy per $1 \mathrm{~s}: \mathrm{E}_{1}=\frac{7.39550 \times 10^{13}}{24 \times 3600}=8.5596 \times 10^{8} \mathrm{~J}$ | 0.75 |
| 7 | efficiency $\mathrm{r}=\frac{2.575 \times 10^{8}}{8.5596 \times 10^{8}}=0.30=30 \%$ | 0.5 |

## Exercise 3: (6 points) The History of Astronomy

| Part |  | Answer |  |  | Mark |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | 1.1 | Geocentric theory Heliocentric theory |  |  | 1.5 |
|  | 1.2 | Geocentric theory: The ancients believed that the Earth is flat and it is at the center of the universe <br> OR: The Sun, stars and the other planets rotate around the Earth. Heliocentric theory: the Earth and the other planets revolve around the Sun. |  |  | 1 |
|  | 1.3 | One of the following similarities: <br> - The moon rotates around the Earth. <br> - The motion of planets is uniform. <br> - The orbits of planets are circular. <br> - The universe is spherical. <br> - Fixed stars carried by a sphere. |  |  | 0.5 |
| 2 | 2.1 | Galileo Galilee made the first astronomical telescope. |  |  | 0.75 |
|  | 2.2 | Isaac Newton established the law of universal gravitation |  |  | 0.75 |
| 3 |  | Two expressions refer to Copernicus' theory | Two common expressions refer to Copernicus' theory and Kepler's laws | Two expressions refer to Kepler's laws | 1.5 |
|  |  | Expression 2 <br> Expression 6 | Expression 1 <br> Expression 3 | Expression 4 <br> Expression 5 |  |
